

MODSECUR IT CONTAINER

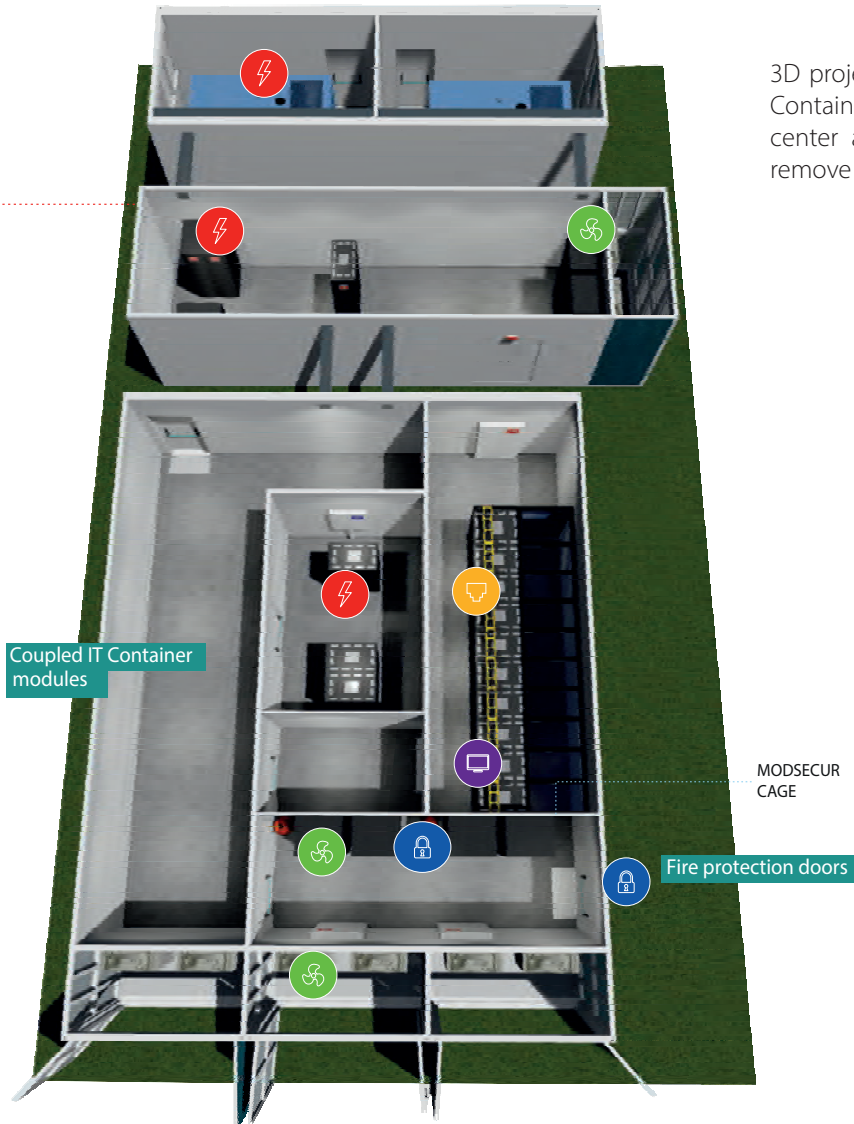

ModSecur[®] IT Container is a complete, prefabricated solution and an excellent option to ensure operational efficiency, because of its construction, and because of the modularity of its infrastructure. In this way, companies can adjust their data center to their real needs, without any stops.

Portability is one of the advantages of ModSecur[®] IT Container modules, which gives you the flexibility you need for a data center solution. Its construction method and the equipment make the IT Container a sustainable and scalable solution, ensuring that your business is always ready for the future.

MODSECUR IT CONTAINER

High thermal insulation;
Fire resistant panel

3D project example, with coupled IT Container units, expanding the data center area. It's possible to add or remove modules, as needed.

Fire protection
EI 120 min

Access control and
high security lock

10-Year
Warranty
